Linux

How do I upgrade from Debian Etch to Debian Lenny?

Hi Folks,

Lenny is out for a few days now and the upgrade process is quite straight forward:
(please do that in textmode and not in your GUI, so KDE or whatever can be restarted without any issues)

- vi /etc/apt/sources.list
  (change etch to lenny)
  Should look a bit like this:

    deb http://ftp.nl.debian.org/debian lenny main contrib non-free
    deb http://security.debian.org lenny/updates main contrib

- aptitude update
- aptitude install apt dpkg aptitude
  (accept the first solution, it is fine)
- aptitude full-upgrade
  (read through the suggestion, but the first one is usually the best)
- aptitude upgrade

enjoy!
