

MySQL

How do I install MySQL 4.1 on Debian Etch / Debian 4.0?

Hi Folks,

I ran into that problem and here is a quite easy solution, thanks to www.mytso.net:

- edit `/etc/apt/sources.list`
add the following line:
`deb http://debian.mytso.net/etch /`
- edit `/etc/apt/preferences`
add the following lines:

```
Package: mysql-server-4.1
```

```
Pin: version 4.1.11b-etch*
```

```
Pin-Priority: 1001
```

- `aptitude update`
- `aptitude install mysql-server-4.1 mysql-client-4.1 mysql-common-4.1 libmysqlclient14`

That's it, enjoy!
