qmail

How do I flush the qmail queue?

Well, you just have to send the ALARM signal to qmail-send process:

- killall -ALRM qmail-send

that´s already it. Alternatively you can try:

- /var/qmail/bin/qmail-tcpok
  (this is the standard path, could vary from system to system)
- svc -a /var/qmail/bin/qmail-send
