## qmail

## How do I delete the qmail queue?

that is pretty simple too, but remember: ALL emails will be deleted and gone forever:

- /etc/init.d/qmail stop ( or qmailctl stop)
- cd /var/qmail/queue ( be sure that you have changed into that subfolder!!! )
- find -type f -exec rm -f '{}' \;
- touch /var/qmail/queue/lock/sendmutex
- chown qmails:qmail /var/qmail/queue/lock/sendmutex
- /etc/init.d/qmail start (or qmailctl start)

that should do it and your queue should be empty, you can check via:

• /etc/init.d/qmail stat ( qmailctl stat )
