Mac OS X

How to fix AFP connections to old server/nas? (Mac OS X Lion)

I ran into this problem with Lion and I am sure more and more people will now, as it was released. My Thecus NAS was working fine with Mac OX X 10.6 but with Lion more changes came along, and now it is necessary to change a few things to make it work.

For those who are interessted, this also came up in the Apple Developer Forum here.

Open a Terminal and run this commands:

```
sudo chmod o+w /Library/Preferences
defaults write /Library/Preferences/com.apple.AppleShareClient afp_host_prefs_versio
n -int 1
```

Now restart your computer. Open a Terminal again and run the following commands:

```
sudo defaults write /Library/Preferences/com.apple.AppleShareClient afp_disabled_uam
s -array “Cleartxt Passwrd” “MS2.0″ “2-Way Randnum exchange”
sudo chmod o-w /Library/Preferences
```

Restart your computer again and afterwards it should work again.
