Confixx

How to fix Confixx after perl/CPAN update?

If you encounter errors like this one:

```
Can't locate loadable object for module Confixx::Filter
in @INC (@INC contains: /etc/perl /usr/local/lib/perl/5.10.0
/usr/local/share/perl/5.10.0 /usr/lib/perl5 /usr/share/perl5
/usr/lib/perl/5.10 /usr/share/perl/5.10 /usr/local/lib/site_perl .) at
 /root/confixx/confixx_counterscript.pl line 2Compilation failed in require at
 /root/confixx/confixx_counterscript.pl line 2.BEGIN failed--compilation aborted at
/root/confixx/confixx_counterscript.pl line 2.
```

It is usually quite trivial to fix, since the only thing missing is a CPAN module required by Confixx:
You need to find you confixx installation folder, e.g.: /root/confixx, then do the following:

- cd /root/confixx/admin/CPAN
- tar -zxf Updater-1.0.6.tar.gz
  (the -1.0.6 might be different, e.g.: 1.0.5, what ever version you have installed of Confixx)
- cd Updater-1.0.6
- perl Makefile.PL
- make install

That should be it.
