Debian

How to setup framebuffer in grub / console in Debian Wheezy?

First install the frame buffer console

```
aptitude install fbterm
```

edit the following file: vi /etc/default/grub and change the following lines to the resolution you would like:

```
GRUB_GFXMODE=1920x1080
GRUB_GFXPAYLOAD_LINUX=1920x1080x32
```

reboot and that should do the trick! Don´t mess up the resolution or your system might not be able to boot proberly anymore. Either be save or keep a recovery boot media close.
