git

How to fix error: RPC failed; result=56, HTTP code = 0?

This happend to me when pushing bigger changes to my git server. The usual size is 2MB, so what I did is just set the limit to 2MB and it ran through fine:

```
git config --global http.postBuffer 2M
```

Here some addtional technical information:

```
http.postBuffer

    Maximum size in bytes of the buffer used by smart HTTP transports

    when POSTing data to the remote system. For requests larger than

    this buffer size, HTTP/1.1 and Transfer-Encoding: chunked is used

    to avoid creating a massive pack file locally. Default is 1 MiB,

    which is sufficient for most requests.
```
