Daemon

How to fix broken sasl after system update?

If you get error message like these on Debian Lenny/Etch (after an system upgrade):

- No run directory defined for , cannot stop
- No run directory defined for , cannot start

you might want look into that file: /etc/default/saslauthd

```
START=yes
MECHANISMS="pam"
MECH_OPTIONS=""

OPTIONS="-c"
THREADS=5
OPTIONS="-c"
```

if it looks like that you should add the following:

```
NAME="saslauthd"
```

and change the options to:

```
OPTIONS="-c -r -m /var/run/saslauthd"
```

Now sasl should start as expected... enjoy!
