

Linux

How to duplicate / copy GPT partition table?

sfdisk doesn't do the trick on GPT tables, so [this](#) will not work.

This is also easy, we need to install

```
aptitude install sgdisk
```

and then run this two commands: (this will copy the partition table from sda to sdb and then reload the table)

```
sgdisk -R=/dev/sdb /dev/sda  
sgdisk -G /dev/sdb
```
