

# exim

## How do I flush the exim mail queue?

Hi Folks,

well, here is something to get you started:

- `exim -qf`
- `exim -qff`

The first command will rerun the mail queue and the second one will also try to redeliver also frozen messages.

You might also want to add `-v` to get more verbose output:

- `exim4 -qff -v`

Enjoy!
