

qmail

How do I delete the qmail queue?

that is pretty simple too, but remember: ALL emails will be deleted and gone forever:

- `/etc/init.d/qmail stop` (or `qmailctl stop`)
- `cd /var/qmail/queue` (be sure that you have changed into that subfolder!!!)
- `find -type f -exec rm -f '{}' \;`
- `touch /var/qmail/queue/lock/sendmutex`
- `chown qmails:qmail /var/qmail/queue/lock/sendmutex`
- `/etc/init.d/qmail start` (or `qmailctl start`)

that should do it and your queue should be empty, you can check via:

- `/etc/init.d/qmail stat` (`qmailctl stat`)
